

This is one of our catalog entries, which also serve as signs at the June 1 sale.

*Light requirements
(in this case full sun to part shade)*

Deer resistant (though of course deer will eat almost anything when food supplies are low)

Aster, Skyblue

Symphotrichum oolentangiense

\$6 / 3.5 in. pot

Benefits birds, bees, butterflies & other insect pollinators

Deer resistant

Blooms: August-October

Full sun to part shade

Soil: Medium to dry, well-drained

Height: 2 – 3 feet

Spread: 18 - 24 inches

Some of the wildlife that benefit from this plant. You may see bees, butterflies, moths, squirrels, hummingbirds and fruit-eating birds. Descriptions are not exhaustive. In fact, most of the perennials will provide food for birds right through the winter. Don't clean your garden in the fall!

Denotes a keystone species, one that has a disproportionately large effect on its environment relative to its abundance. Search for an article by Catherine Zimmerman in the Yellow Springs News (ysnews.com) for an excellent explanation of these special native plants. The asters, goldenrods, milkweeds, oaks, and many other plants in this sale are examples of keystone species.
